

Class diagram (OOP) - Control Store | Autoservicio Ayuelal
17 classes (1 abstract) - 3 enumerations - 17 associations (one per database foreign key) - 3 generalizations
Notation: - private | + public | {id} identifier (primary key in the database) | /attribute = derived (computed column) | *italics* = abstract | filled diamond = composition | hollow diamond = aggregation | hollow triangle = inheritance | open arrow = navigability
Multiplicity: 1 = exactly one | 0..1 = zero or one | 0..* = zero or many | 1..* = one or many | Strategy pattern: User delegates its permissions to its Role (composition over inheritance); changing role = changing usuarios.id_rol
